### INTRODUCTION

The SimCheck Livery Installer program is used to add and install liveries to the SimCheck A300B4-200 package. The software will only work with zipped livery files containing the correct files in the correct format.

### INSTALLING AN ADD-ON LIVERY

The install process is done in 3 steps.

#### Step 1

Select the zip file containing the livery files and additional files by pressing the "Select file" button.

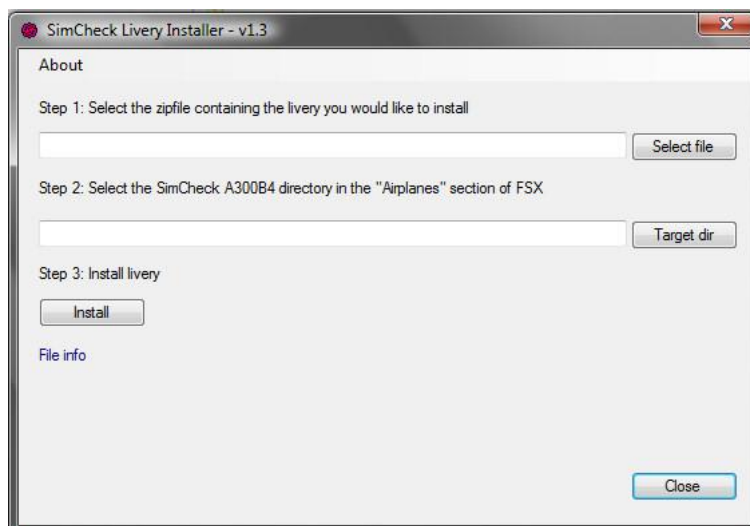

Figure 1: Start screen

The software scans the selected zip file, the content of the info.txt file is displayed together with a thumbnail image of the aircraft. A basic check is performed to make sure all the necessary files are included with the installer file.

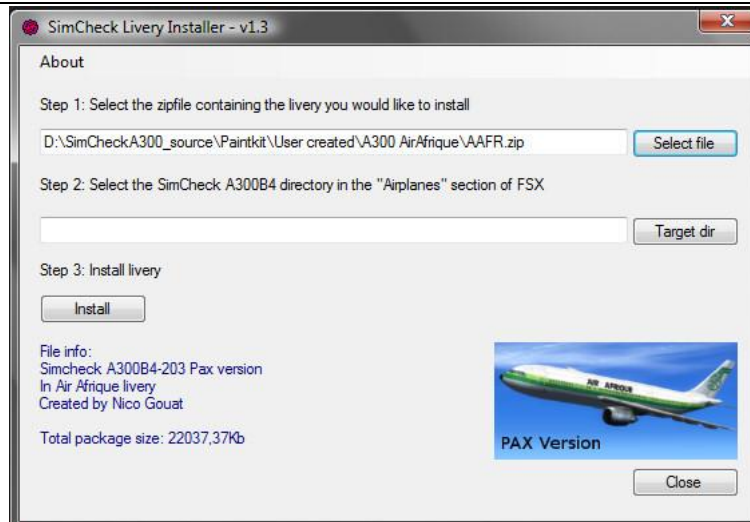

Figure 2: After selecting the installer file

### Step 2

Select the target directory by clicking the "Target dir" button. The software will automatically go to the FSX "SimObjects->Airplanes" directory. Now scroll to and select the SimCheck A300B4-200 subdirectory.

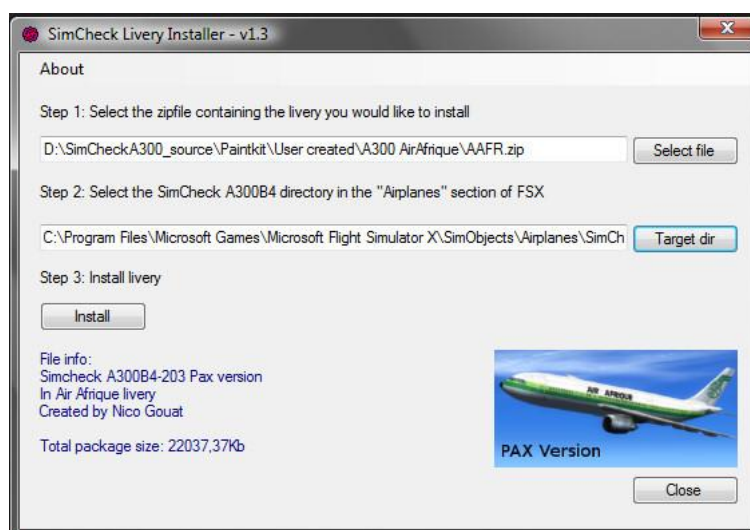

Figure 3: After selecting target directory

### Step 3

Press the "Install" button to install the livery to the target directory. The software will copy the contents of the zipped file into the target directory and add an entry to the aircraft.cfg file.

### CONTENTS AND ORGANIZATION OF THE LIVERY FILE

The livery file is a standard zip file containing several sub-files.

#### Root directory

The root directory must contain a file a file called:

#### **include.file**

The include.file is an ASCII coded textfile that contains the entry to be added to the SimCheck A300B4-200 "aircraft.cfg" file.

E.g.

```
title=A300B4-203 TNT
sim=a300B4-200
model=
panel=
sound=
texture=tnt
kb_checklists=A300B4_check
kb_reference=A300B4_ref
atc_airline=TNT
atc_flight_number=668
atc_id=
atc_heavy=1
ui_manufacturer=Airbus
ui_type=A300B4-200
ui_variation=TNT
ui_createdby="SimCheck Software"
description=TNT A300B4-203
visual_damage=1
```

The information in this file is copied unchanged and unchecked into the aircraft.cfg file, so make sure all the information is correct !

A "texture.xxx" subdirectory

The zip file must also contain a subdirectory which includes the following files:

```
A300_fuselage_3.dds
A300_fuselage_4096_1.dds
A300_fuselage_4096_1_1.dds
A300_fuselage_4096_2.dds
A300_fuselage_4096_2_1.dds
engine1.dds
engine1_1.dds
engine2.dds
engine2_1.dds
texture.cfg
```

On top of that also include an ASCII encoded text file called "info.txt" that contains the extra information about the add-on livery that will be displayed in the installer program.

E.g.

```
Simcheck A300B4-203 Cargo version
In TNT colors
```

Finally include a 256 by 128 pixels sized "thumbnail.jpg" file that will be shown in the installer program.

E.g.
